<div align="center">Networks Project 2 Writeup</div>

Created project in VS code, assuming it can be ran with command: python3 jdo3643_project2.py or python jdo3643_project2.py

MODULES NEEDED: tkinter and network

Limitations: Cannot read double digit number from input file so therefore cannot enter in 16 to indicate line failure. Must change values of input file by going into folder and modifying input.txt. Program does not accept input file through command line argument

Screenshots show results from values given in assignment pdf
